

## Steps for creating a compute resource (cluster) on Databricks

Zoya Shafique, Sarim Asrar  
DSE I2450, Spring 2024

1. Navigate to the compute tab in the sidebar.

2. Click on the 'Create Compute' button in the upper right-hand corner.
3. After giving your compute a name, select the Databricks runtime.
  - Notebooks in this tutorial were created and tested with the **12.2 LTS ML (Scala 2.12, Spark 3.3.2)** runtime.
4. It takes a moment for the cluster to spin up. Once the cluster is running, navigate to your notebook using the workspace tab in the sidebar.
5. Click 'Connect' in the top right-hand side of the title bar in your notebook and select your cluster. It might take a minute for the cluster to connect.
